Control Zigbee Device with MQTT Worksheet

In this worksheet we provide a step-by-step guide to create, build and run Z3GatewayHost and NCP sample based on EmberZNet Stack 6.6.4. If you use a later release in the future, most of the instructions should still apply, although there could be minor differences not foreseen at the time of this document.

These exercises help you get familiar with ZigBee 3.0 in the EmberZNet Stack, Simplicity Studio v4 development environment, and the Wireless Start Kit (WSTK) with EFR32MG modules. We assume that you have a WSTK and the following software requirements:

- Simplicity Studio 4
- EmberZNet 6.6.4
- GCC 7.2

KEY FEATURES

- Step-by-step guide to creating, building and running ZigBee 3.0 applications based on EmberZNet 6.6.4
- Use Simplicity Studio v4 as the development tool
- ZigBee end device polling
- Zigbee end device keepalive and aging
- Zigbee end device rejoin

1 Pre-requisites

Make sure you have installed the EmberZnet 6.6.4 SDK and GCC toolchain on your PC.

1.1 Check EmberZnet SDK

1. Launch Simplicity Studio v4.
2. “Windows”→”Preference”→”Simplicity Studio”→”SDKs”, make sure “EmberZnet 6.6.4” is installed

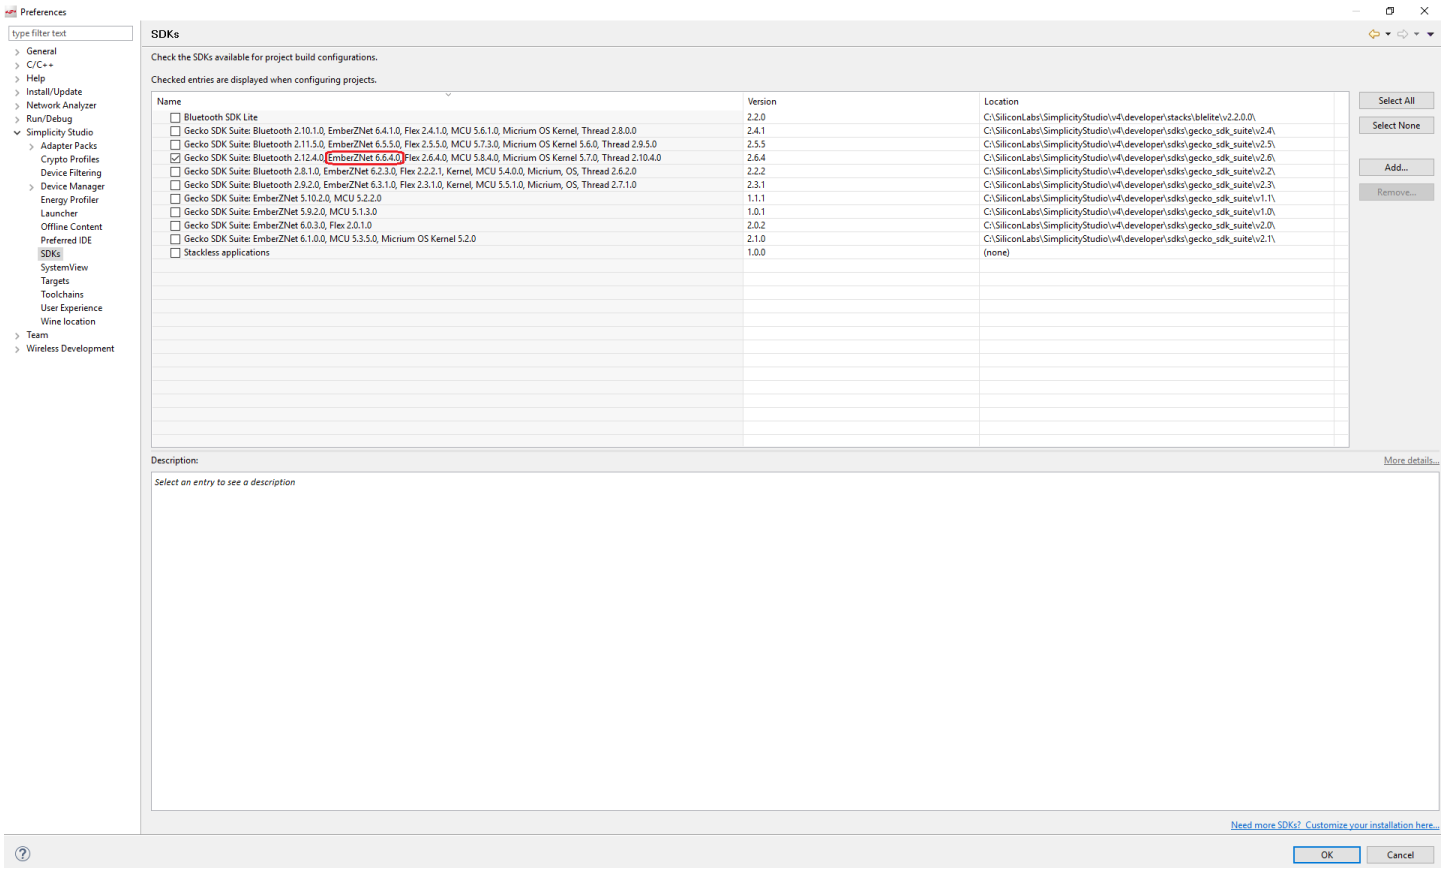

Figure 1 Check SDK in Simplicity Studio

1.2 Check Toolchains

1. Launch Simplicity Studio v4.
2. “Windows”→”Preference”→”Simplicity Studio”→”Toolchains”, make sure GCC toolchain is installed.

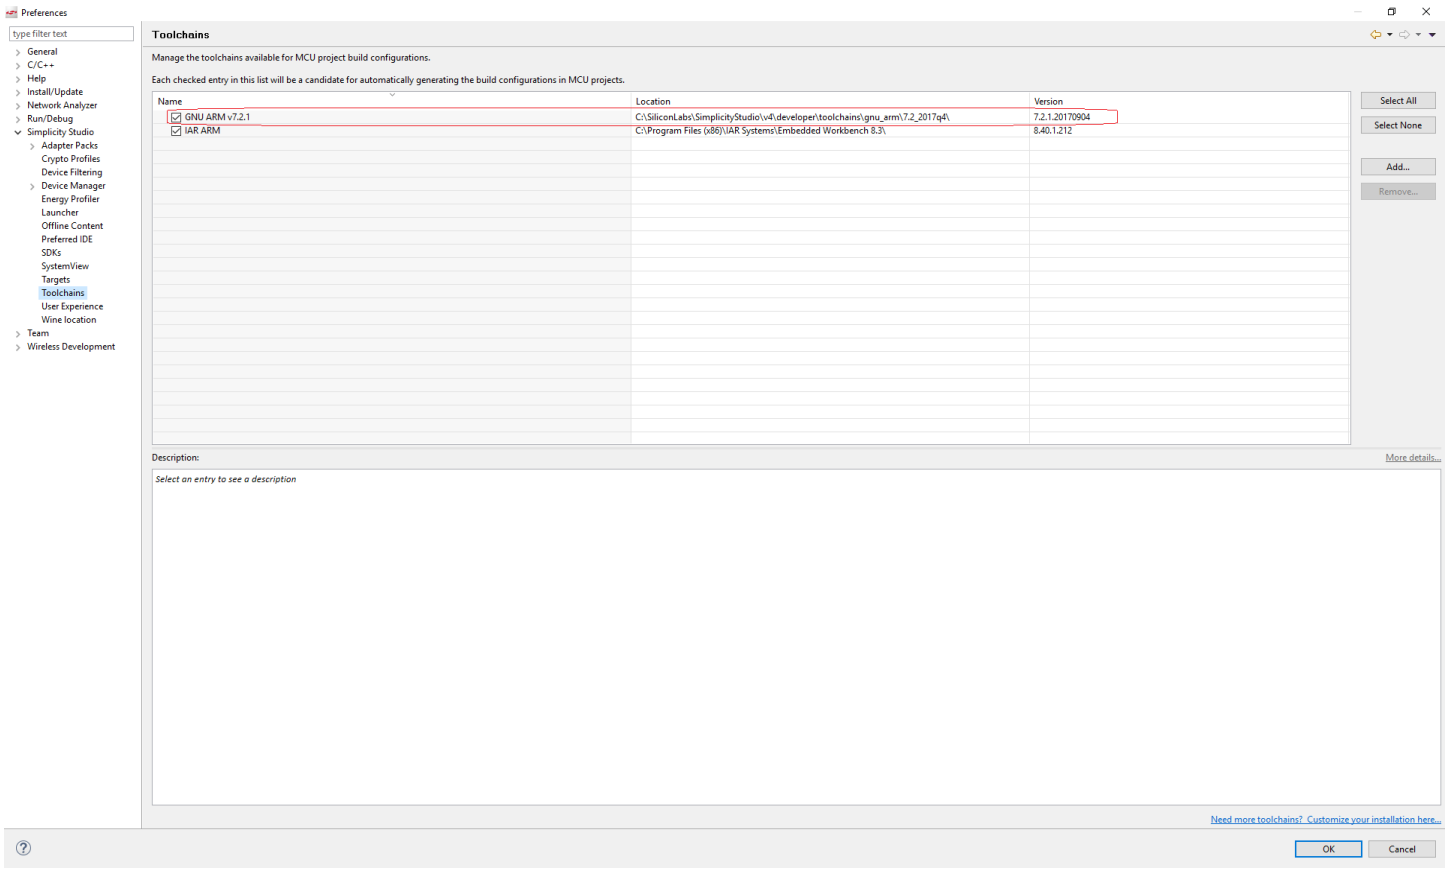

Figure 2 Check Toolchain in Simplicity Studio

1.3 Install the software tools:

1. Cygwin;

Extract the package cygwinx86.rar, and copy it to the root directory of disk C.

2. MQTT broker;

Install mosquitto-1.6.7-install-windows-x64.exe, then press “Win+R” and input “services.msc” to start the service manager.

Find “Mosquitto Broker”, and make sure it’s in “running” status. (If it’s not running, select it and right click then select start)

3. MQTT client

Install MQTTBox-win.exe.

2 Flash the program

1. Start Simplicity Studio, then connect your device to PC;
2. In the menu bar, find the icon  for “Flash Programmer”, press it;
3. In the popup window, select the device;

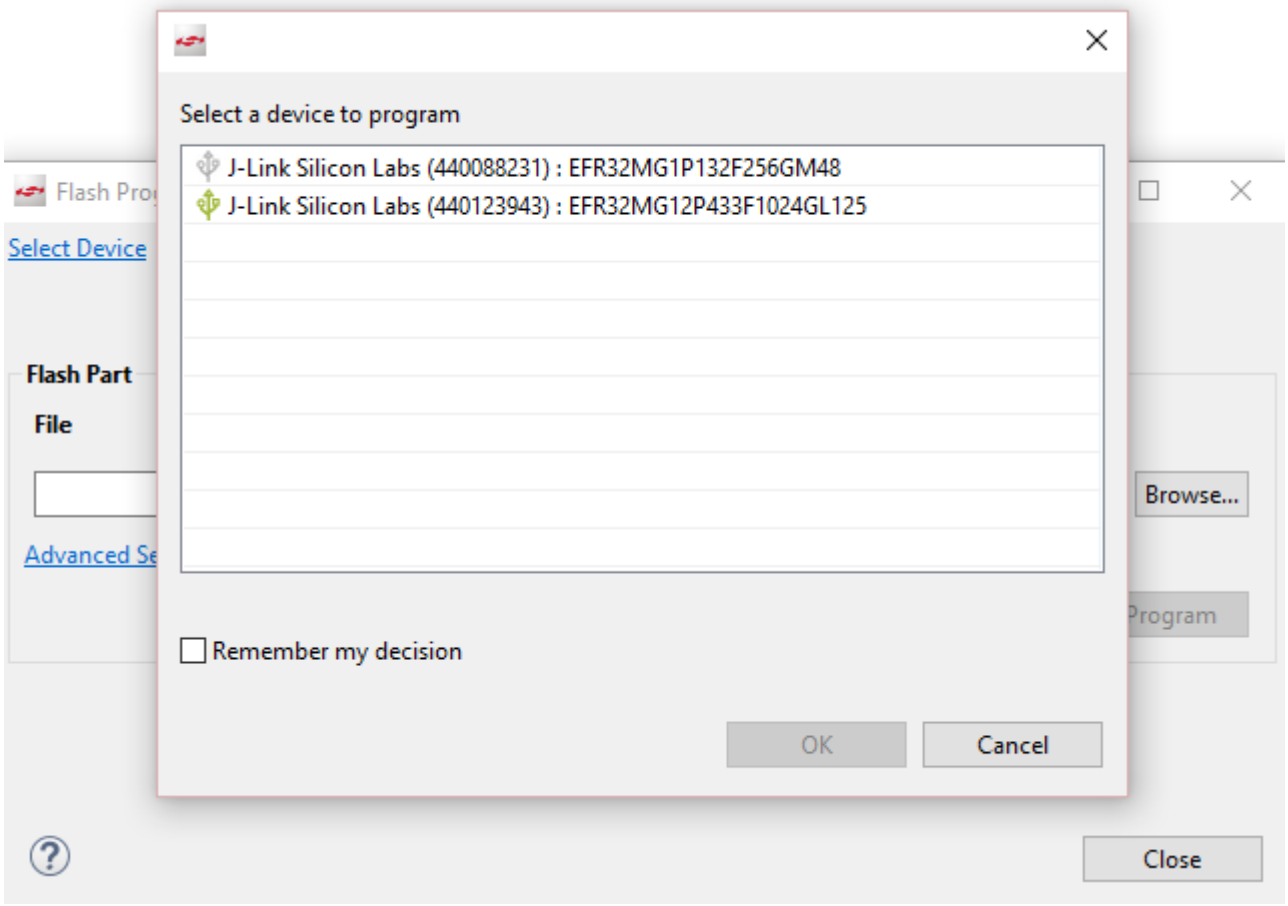

Figure 3 Select device

4. Then in the next window, click “browse” to select the image(.s37 or .hex), press “Program”. You can also press “erase” if needed.

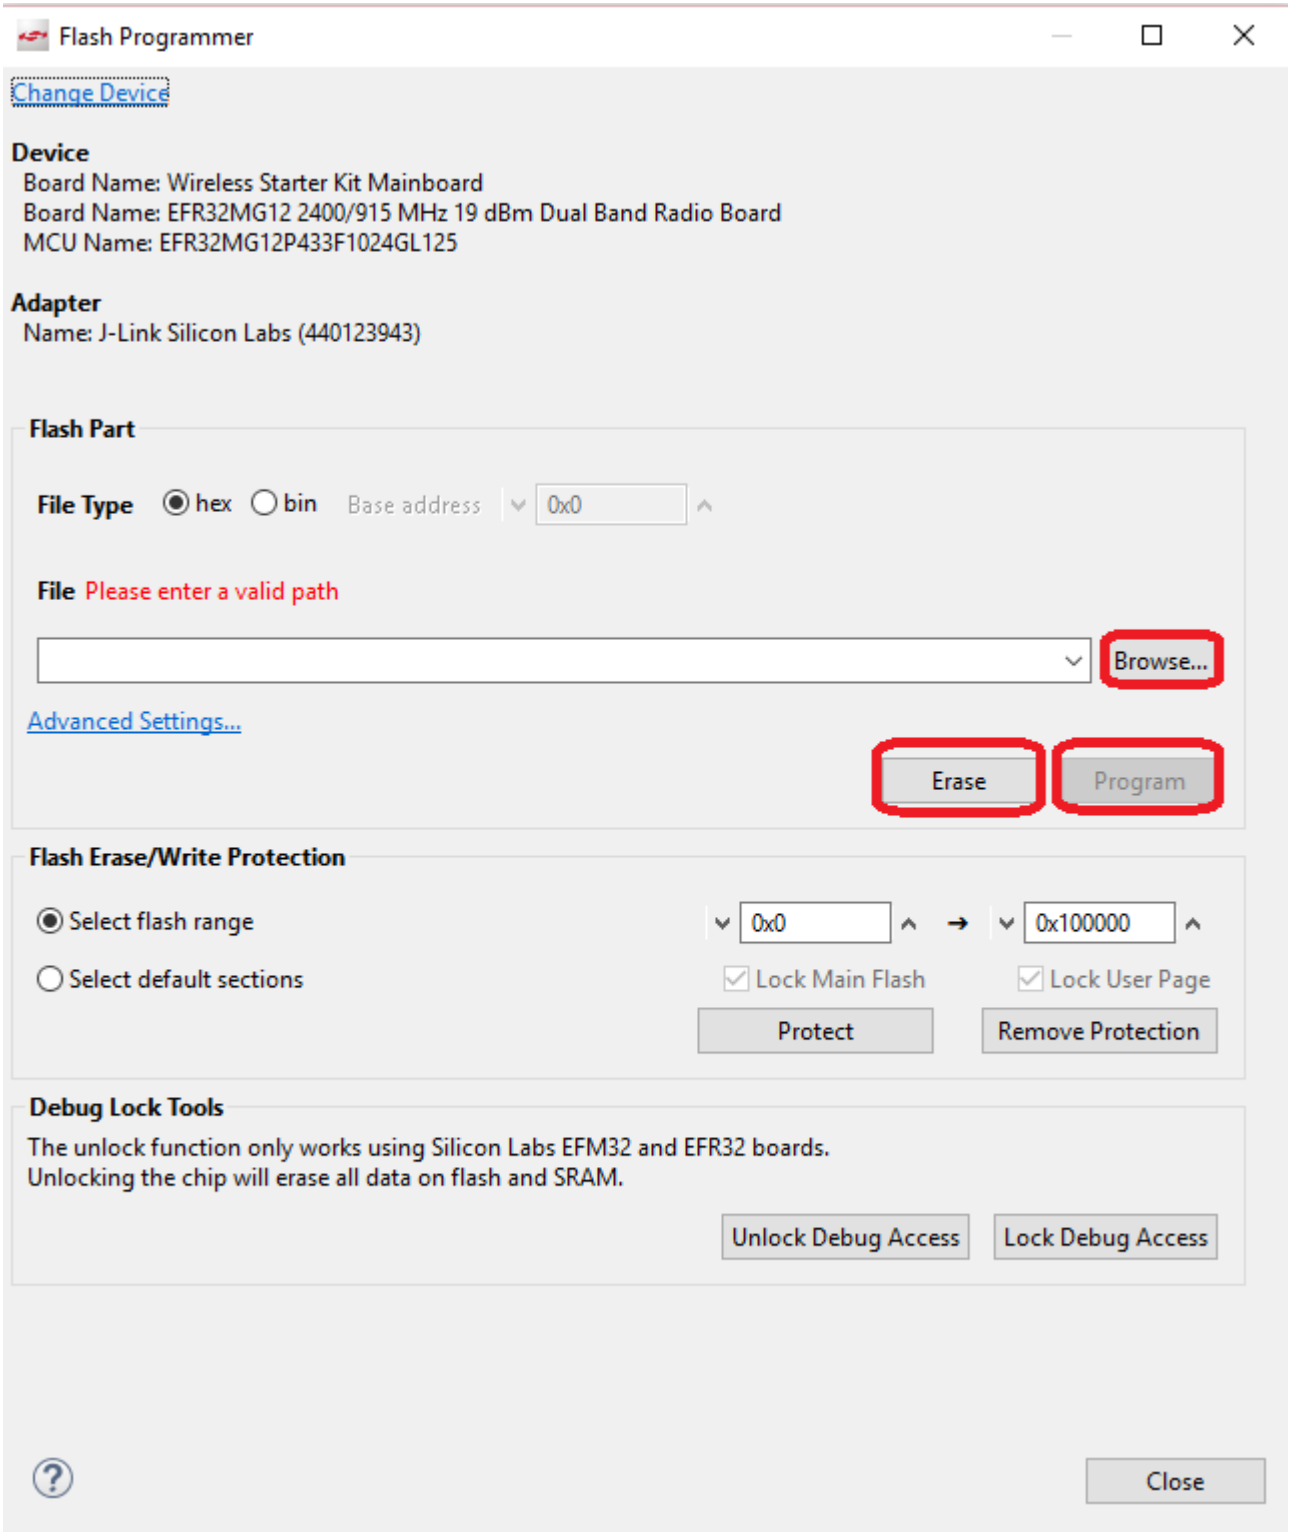

Figure 4 Flash application

3 Open console

Simplicity Studio has integrated a console so that it's convenient to debug through console. To use the console, you need:

1. Change to "Simplicity IDE" perspective 
:

2. Select your adapter in the “Debug Adapters” window, right click and select “connect”;
3. Select your adapter in the “Debug Adapters” window, right click and select “Launch console”;

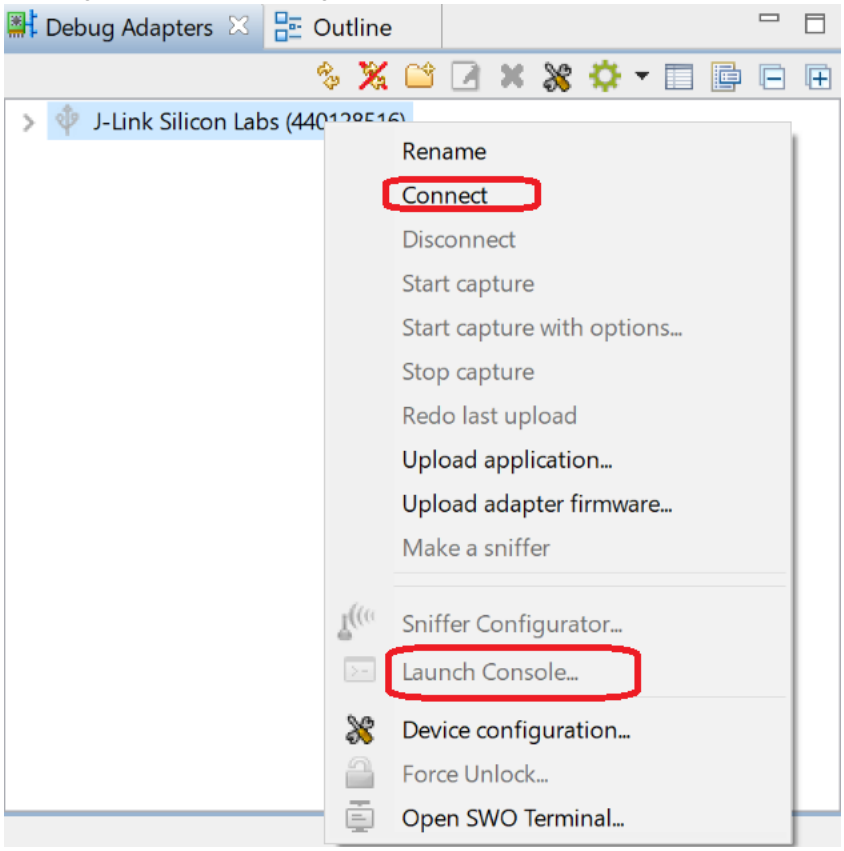

Figure 5 Launch console

4 Start Capture

1. Change to “Simplicity IDE” perspective 

:
2. Select your adapter in the “Debug Adapters” window, right click and select “connect”;
3. Select your adapter in the “Debug Adapters” window, right click and select “Start Capture”;

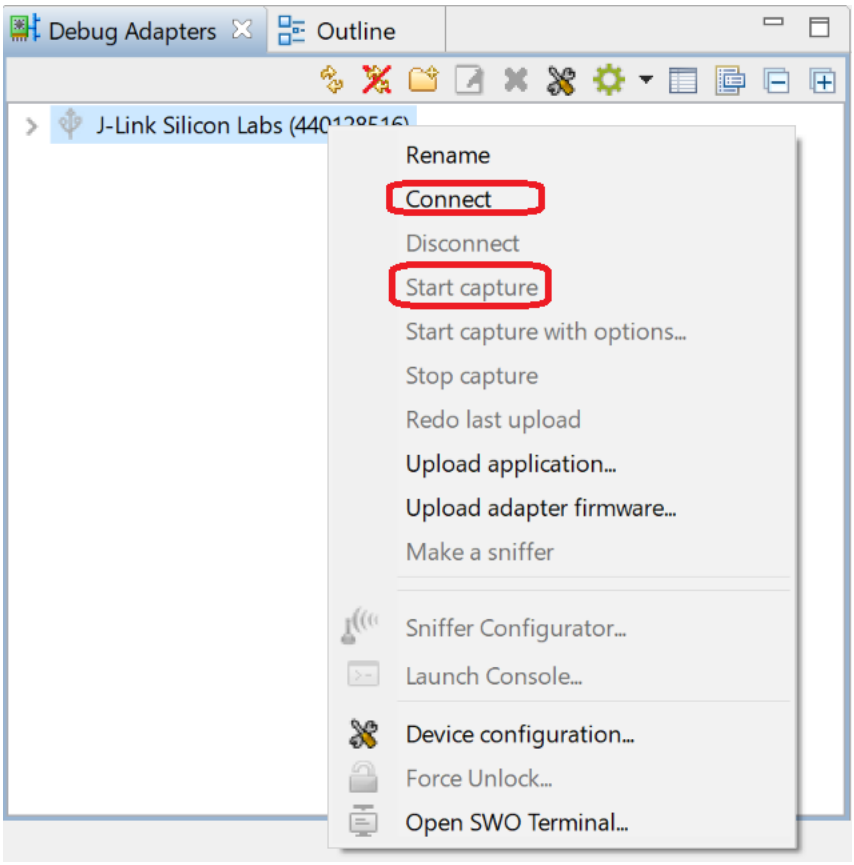

Figure 6 Start Capture

5 Build the bootloader

1. Go to File -> New -> Project. This will bring up the New Project Wizard
2. Select “Silicon Labs AppBuilder Project”. Click Next.
3. Select “Gecko Bootloader”. Click Next.
4. Select the latest version. (Gecko Bootloader 1.9.2). Click Next.
5. Select “UART XMODEM Bootloader”. Click Next.
6. Name your project (Whatever name you want). Click Next.
7. Select board and compiler. Then finish.

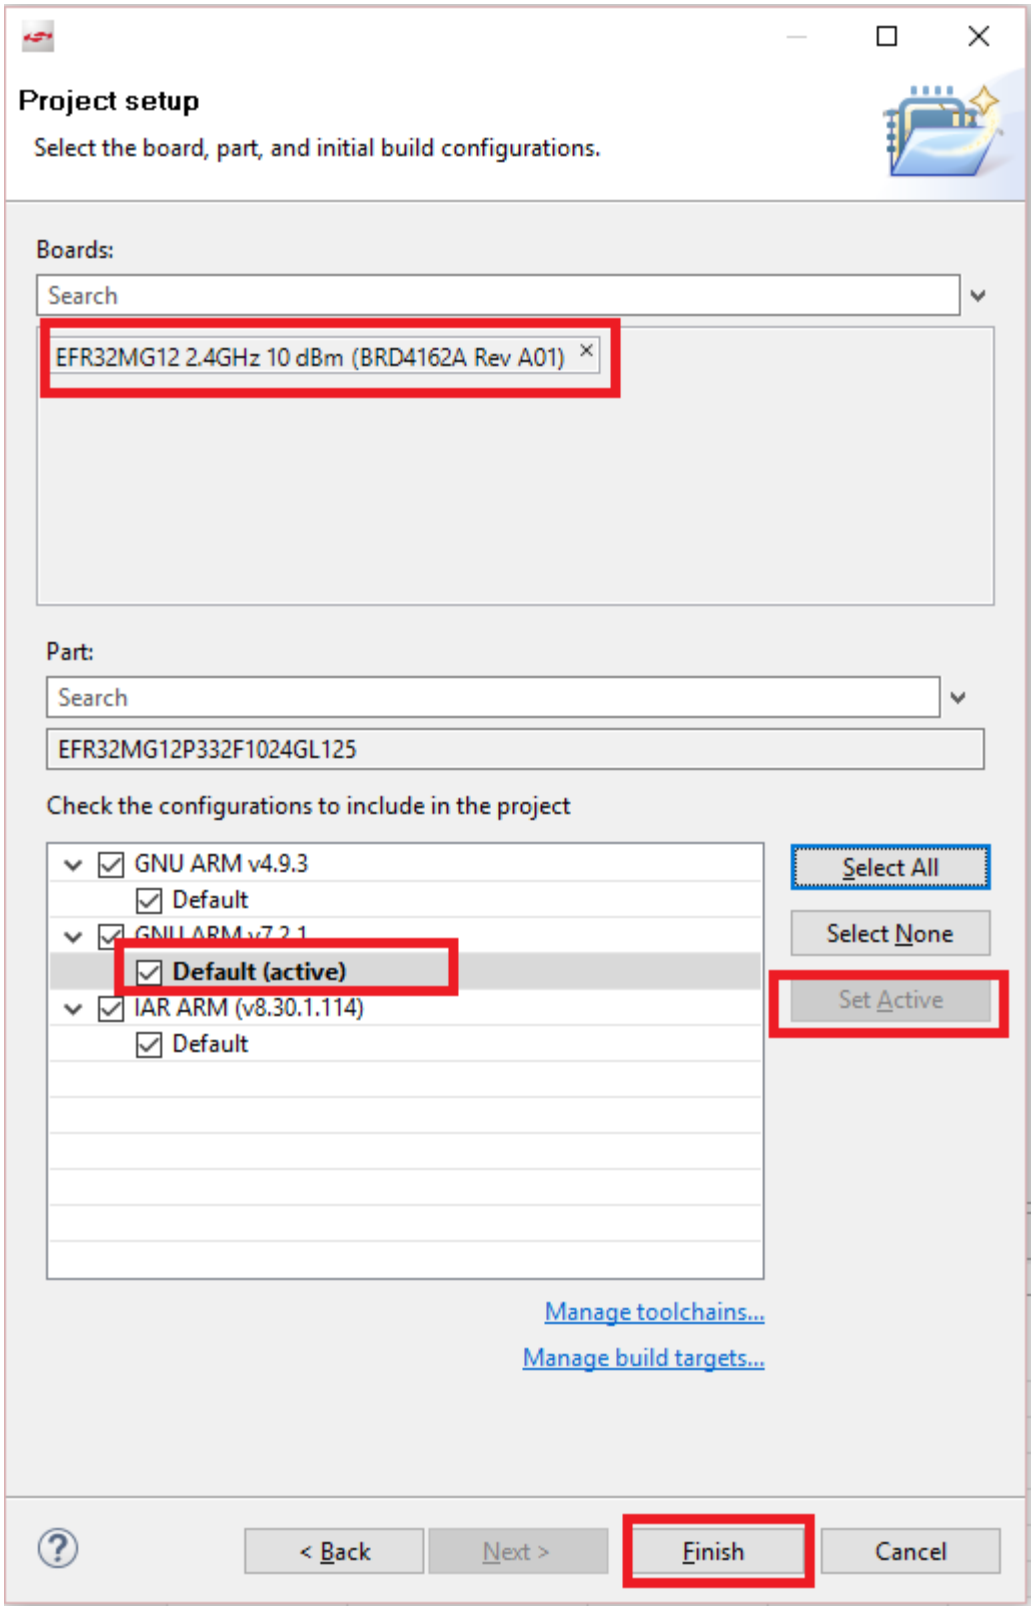

Figure 7 Select board and compiler

8. The new project should have been created now, with the project configuration file (an .isc file) open.
9. Click "**Generate**". Notice the project files appearing in Project Explorer. A window saying Generation successful will appear. Click OK.

10. Select the project in Project Explorer window and compile your project by clicking on the Build icon  . Ensure that the build completes with 0 errors.

6 Build the NCP image

1. Go to File -> New -> Project. This will bring up the New Project Wizard
2. Select “Silicon Labs AppBuilder Project”. Click Next.
3. Select “Customizable network coprocessor (NCP) Applications”. Click Next.
4. Select “NCP UART HW (Hardware Flow Control)”. Click Next.
5. Name your project, such as “ncp”. Click Next.
6. In next window (Project Setup), select board to BRD4162A, and compiler to “GCC v7.2” (If you don’t have it, please install any other). Click Finish.

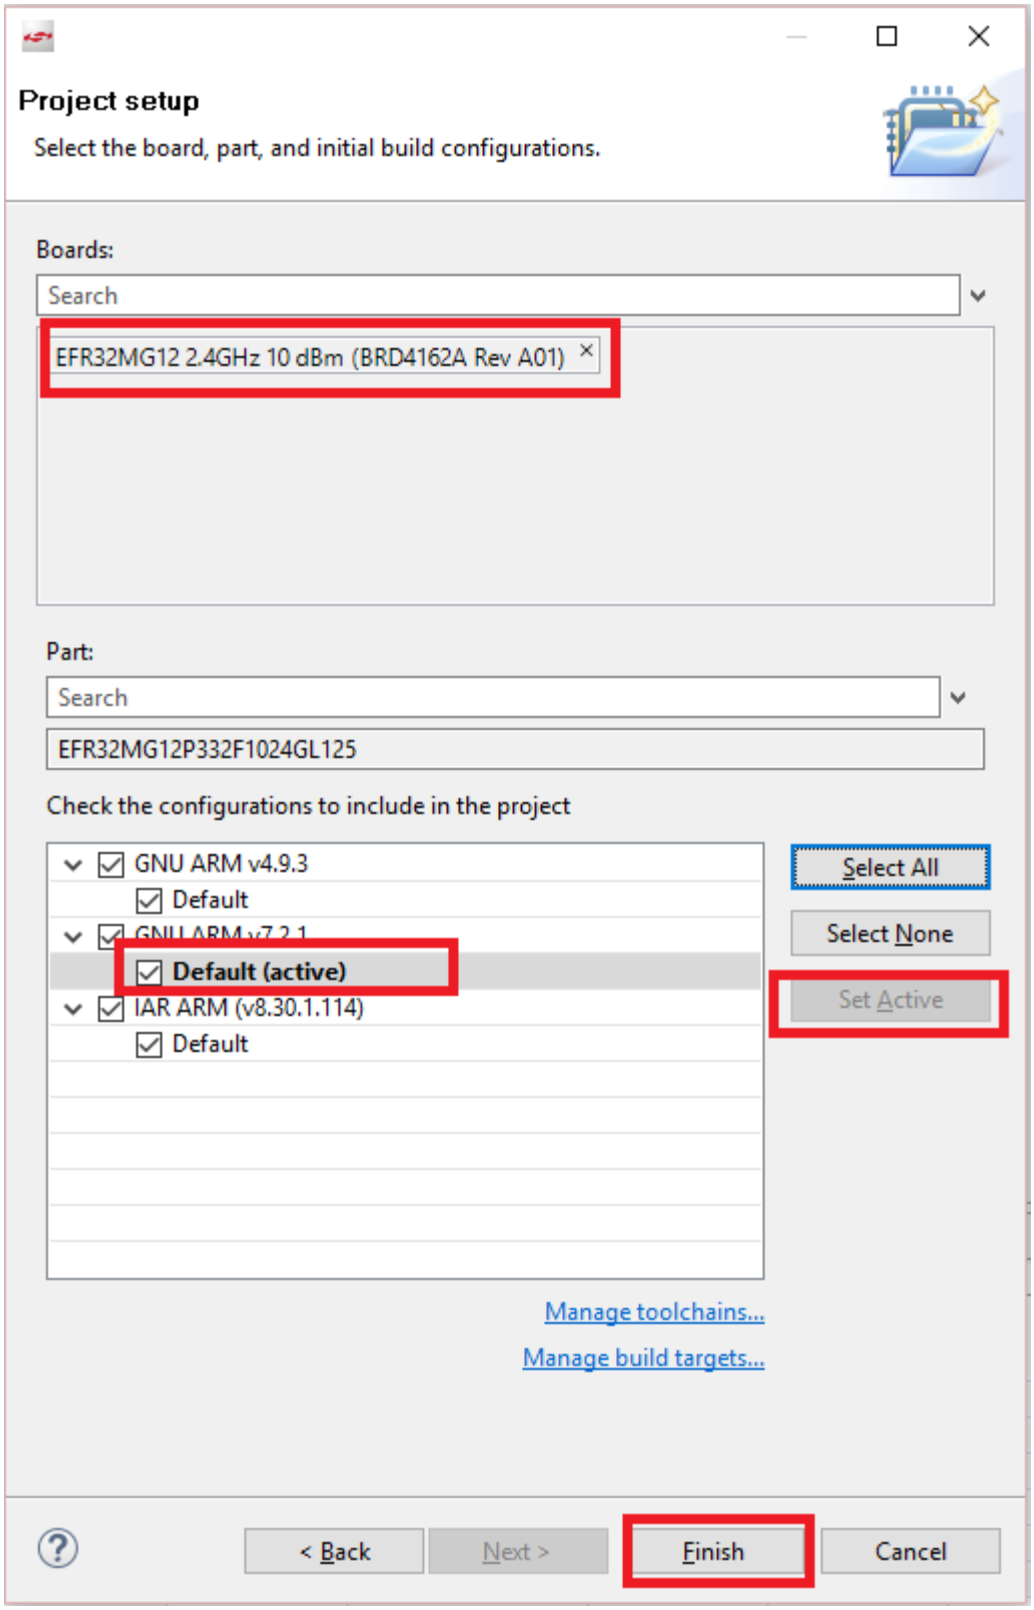

Figure 8 select board and compiler

7. Click “Generate”. Notice the project files appearing in Project Explorer. A window saying “generating successfully” will appear. Click OK.
8. Select the project in Project Explorer window and compile your project by clicking on the Build icon . Ensure that the build completes with 0 errors.

7 Build the host program

1. Go to File -> New -> Project. This will bring up the New Project Wizard
2. Select “Silicon Labs AppBuilder Project”. Click Next.
3. Select “Silicon Labs Zigbee”. Click Next.
4. Select our latest EmberZNet stack for host (in this case EmberZNet 6.6.4 GA Host). Click Next.
5. Select “Z3Gateway”. Click Next.
6. Name your project, such as “Z3GatewayHost”. Click Next.
7. In next window (Project Setup), leave the “Boards” and “Parts” field empty, then finish.

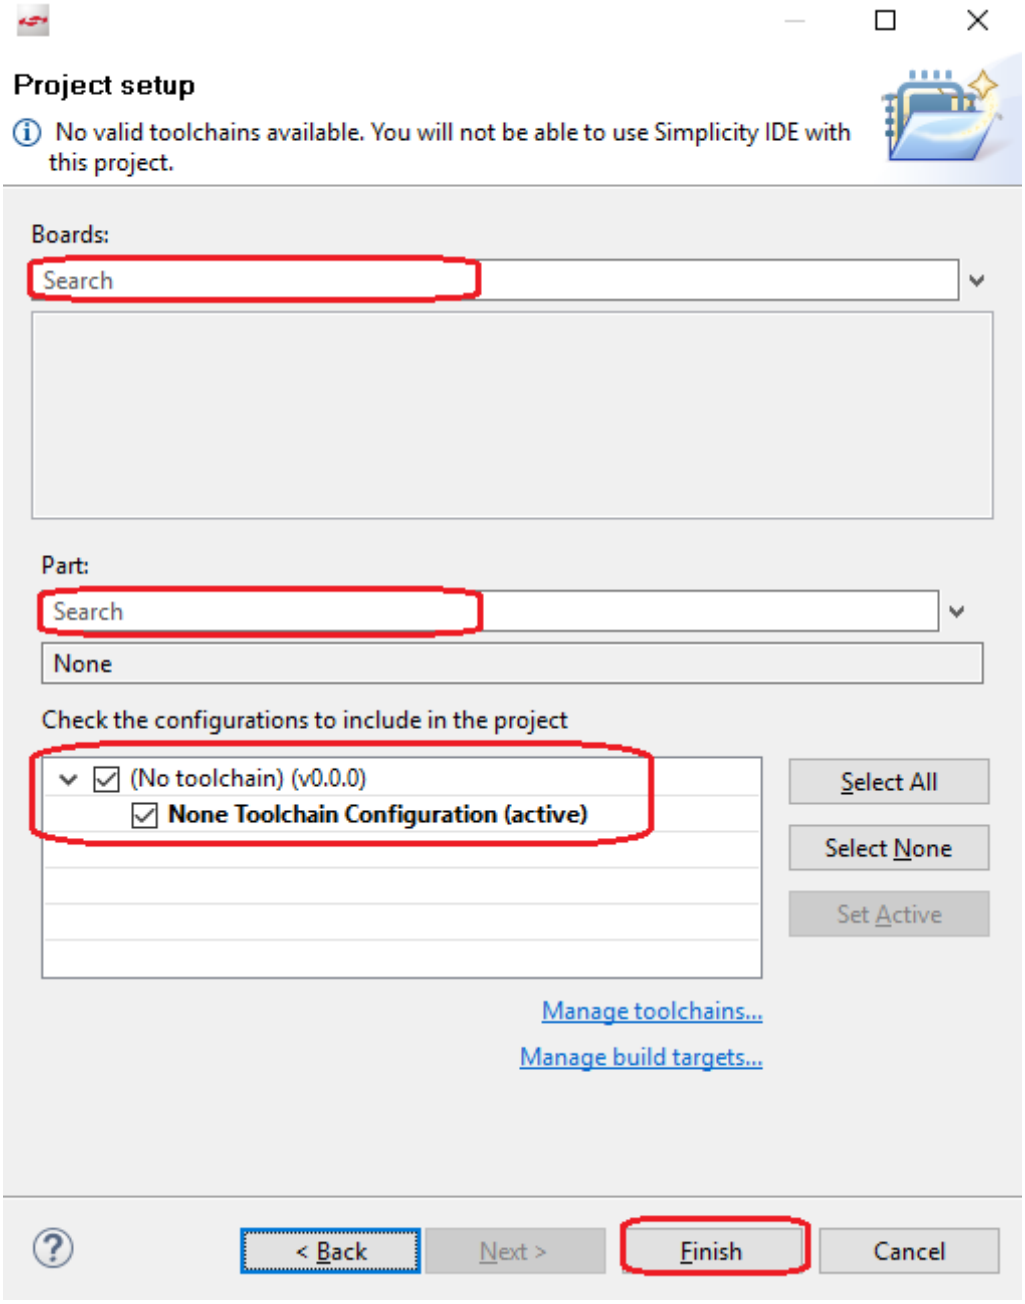

Figure 9 select board and compiler

8. You need to select the following plugins:
    a. Gateway Relay Mqtt
    b. Gateway MQTT Transport
    c. Paho MQTT
    d. CJSON

e. Gateway Support

9. Use “Ctrl+S” to save, then click “Generate”. Notice the project files appearing in Project Explorer. A window saying “generating successfully” will appear. Click OK.
10. Change to Cygwin you extracted, run “Cygwin.bat” to start Cygwin. Change to the project folder and run command “make”. You can find the project directory in “General” tab:

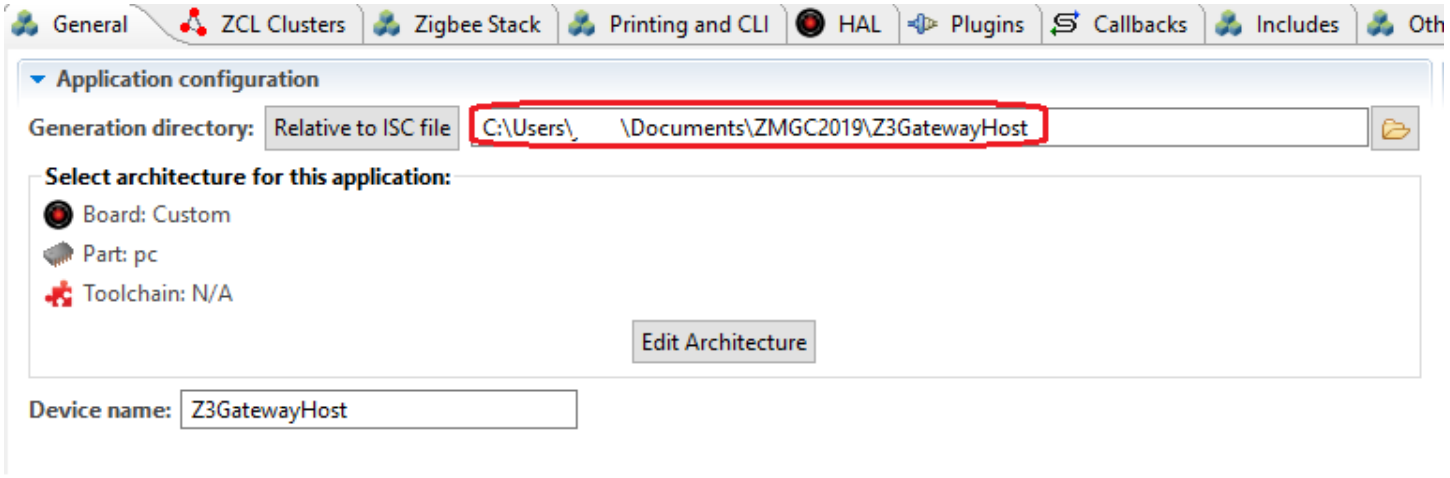

Figure 10 find project directory

Pay attention that you need to replace the windows partition string to Cygwin format.

e.g:

```
//Windows path: C:\SiliconLabs\SimplicityStudio
cd /cygdrive/c/SiliconLabs/SimplicityStudio
```

11. Wait until the build finished. If there is no error, there would be a program “Z3GatewayHost.exe” generated in “build\exe” under your project folder.

8 Test.

1. Flash the bootloader and ncp image to WSTK (NCP);
2. Flash the provided bootloader and Z3Light sample to your light.
3. Find the COM port number of your NCP board.
    a. Start a cmd window:

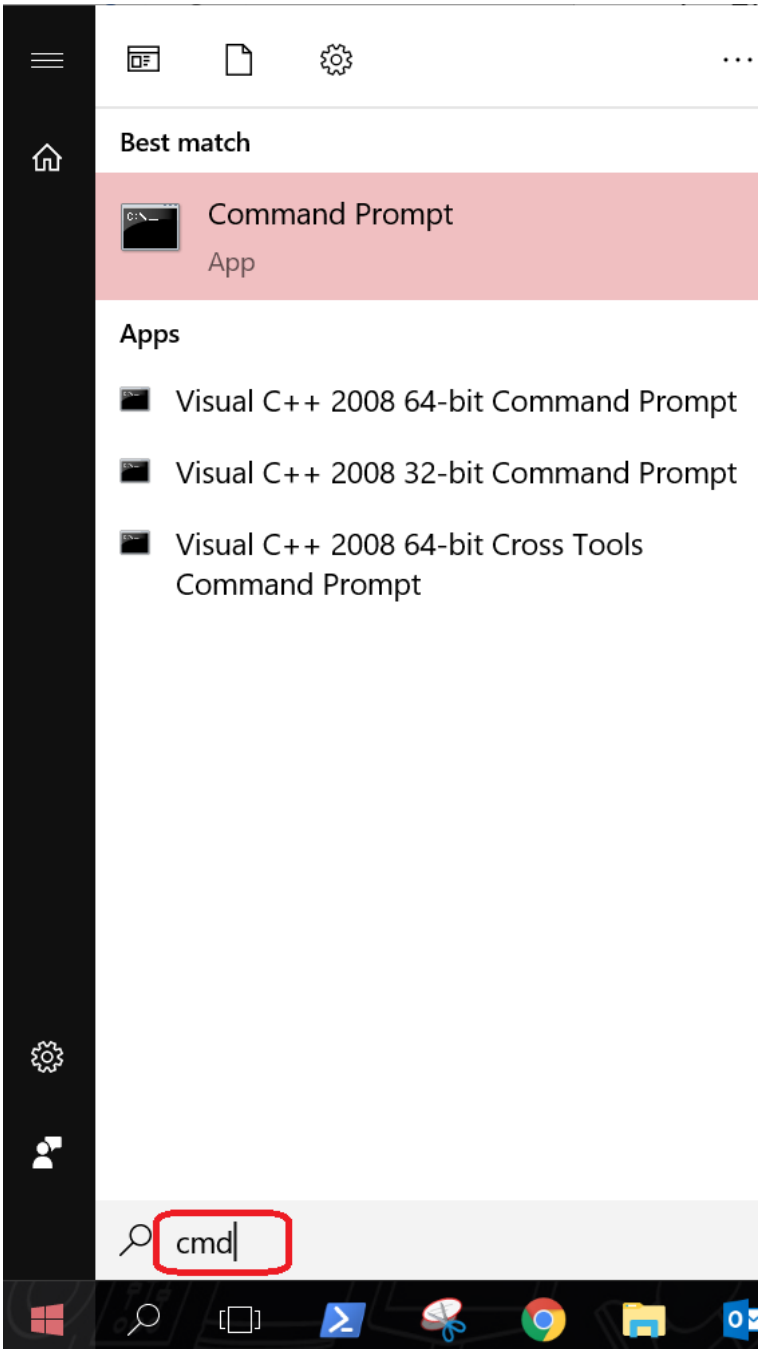

Figure 11 start cmd window

b. Change to C:\SiliconLabs\SimplicityStudio\v4\developer\adapter_packs\serial. Then run command:

```
serial.exe -ports
```

```
C:\SiliconLabs\SimplicityStudio\v4\developer\adapter_packs\serial>serial.exe -ports
{
        "ports" :
        [
                {
                        "Name" : "COM3",
                        "OSID" : "COM3",
                        "SerialNumber" : ""
                },
                {
                        "Name" : "COM17",
                        "OSID" : "COM17",
                        "SerialNumber" : "000440128516"
                }
        ]
}
```

Figure 12 get COM port of the WSTK

4. Start Cygwin, and switch to the directory of the Z3GatewayHost project, then switch to “build/exe” directory. Run the following command to start the host:

```
//COM17 is the COM port of the NCP
./Z3GatewayHost.exe -p COM17
```

```
[redacted] /cygdrive/c/Users/[redacted]/Documents/v4_workspace_2.6/Z3GatewayHost
$ cd build/exe/

[redacted] /cygdrive/c/Users/[redacted]/Documents/v4_workspace_2.6/Z3GatewayHost/build/exe
$ ./Z3GatewayHost.exe -p COM17

MQTT Client Init
```

Figure 13 Start host

Wait until you see the following message. The host program should be able to connect to the MQTT broker in a few seconds.

```
MQTT connected to broker
MQTT connected, starting gateway heartbeat and command processing
Subscribing to topic "gw/90FD9FFFFE7B81BD/commands" using QoS2
Subscribing to topic "gw/90FD9FFFFE7B81BD/publishstate" using QoS2
Subscribing to topic "gw/90FD9FFFFE7B81BD/updatesettings" using QoS2
```

5. Start MQTT client (MQTTBox).
   a. Press button “Create MQTT Client” 

to create a new client.
   b. Fill the “MQTT Client Name”, “Protocol” and “Host” field, and leave the other fields as is. After that, press “save”.

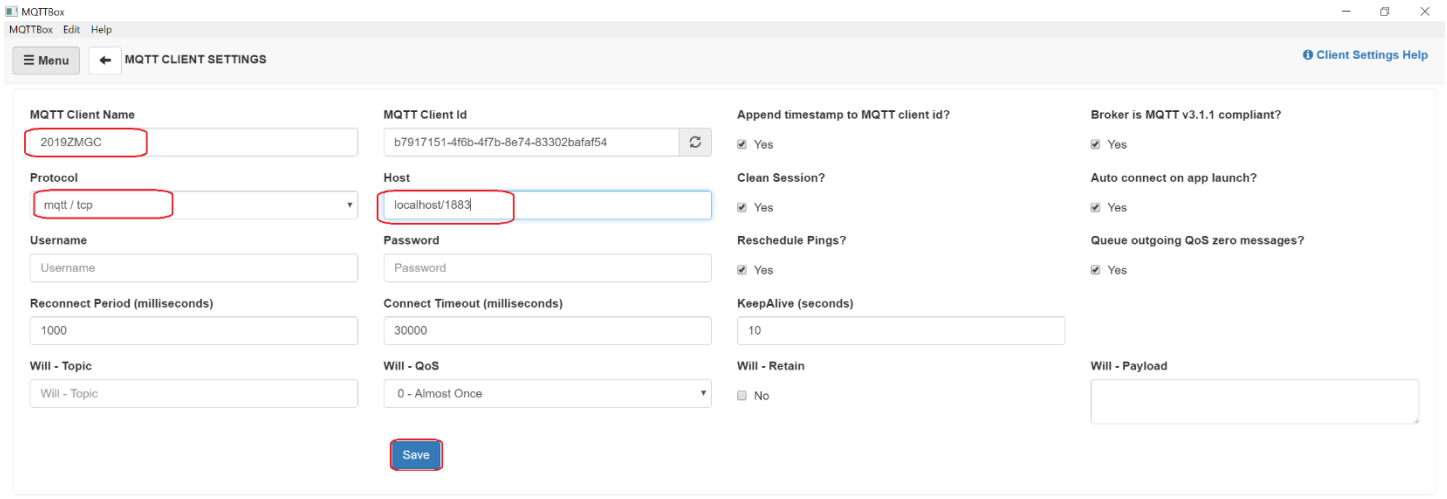

Figure 14 create mqtt client

6. Subscribe the following topic to monitor the device status change.

```
gw/<eui64_id>/devicejoined
gw/<eui64_id>/deviceleft
gw/<eui64_id>/devicestatechange
```

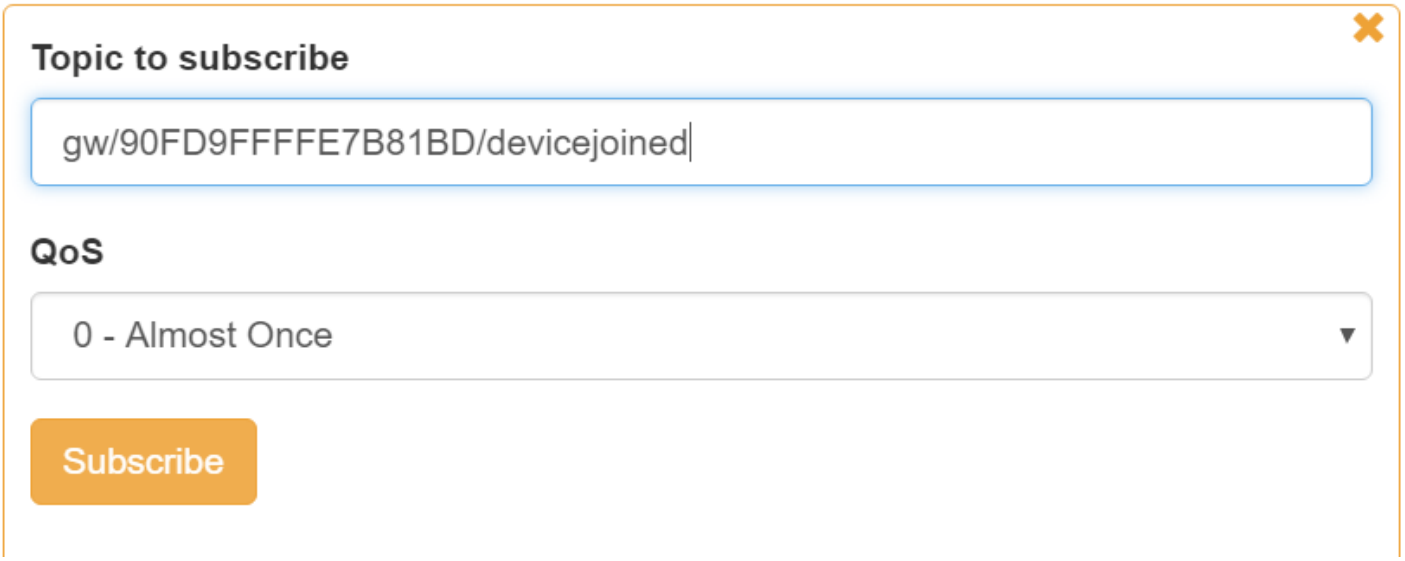

Figure 15 subscribe MQTT topic

7. Publish the following topic to Z3GatewayHost, so that the input command can be run on the host.

```
Topic: gw/<eui64_id>/commands

Payload format:
{
"commands":[{
"command": <String>,
"postDelayMs": <Int>
}]
}
```

   a. Create a network with the following command

```
Topic: gw/<eui64_id>/commands

Payload format:
{
"commands":[{
"command":
"plugin network-creator start 1",
"postDelayMs":0
}]
}
```

8. Join the light to the network following the steps in Chap8 of https://github.com/MarkDing/IoT-Developer-Boot-Camp/wiki/Zigbee-Hands-on-Forming-and-Joining Then observe the subscribe topic on MQTTBox.
9. Use the following command to control the light.

```
Topic: gw/<eui64_id>/commands

Payload format:  here the node id 0x1234 is the node id of the light. You need to modify it ac-
cording to your environment.

{
"commands":[{
"command":
"zcl on-off toggle",
"postDelayMs":0
},
"command":
"send 0x1234 1 1",
"postDelayMs":0
}]
}
```
